

## Preparation for first use

KuuCup is all about simplicity and convenience, so your KuuCup comes to you with minimal packaging. We want to support you and our planet's need for sustainability so we avoid using excessive wrappers that you have to dispose of responsibly. Because of this, KuuCup are not supplied in a sterile state, so we recommend preparing your cup for first use.

Once unpackaged, check your KuuCup carefully to ensure you are happy with the quality and feel of the product. If you have any questions or concerns you can contact us via email using [customercare@kuucup.com](mailto:customercare@kuucup.com)

By boiling your KuuCup in water for 4-5 minutes you are able to ensure your cup is sanitised and ready for use. You can do this using a pan of water on the stove or in a bowl in the microwave. If you are using the stove, we recommend holding your cup with tongs to ensure it doesn't touch the bottom of the pan.

There is no need to dry your KuuCup, once sanitised it's ready to use!
